DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Adachi et al, US Patent 5,170,081. In figure 2, Adachi discloses a ground isolation circuit comprising ground connections G2L and G2R, power connectors 3L, 4L, 3R, 4R and current blocking device 2 which prevents voltage on the electrical ground from converting to a current flow. Regarding claims 2 and 11, the device is connected in series with the ground connection.

Claims 1-4 and 10-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Sacca, US Patent 6,427,011. Sacca discloses an apparatus comprising a power line connector 909, a ground connection 911 and diode bridge 901 containing a plurality of diodes as the current blocking device. Claims 1-4 and 10-14 are rejected.

Claims 1-7 and 10-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Funke, US Patent 5,646,810. Funke discloses an apparatus for reducing electrical noise comprising power line L, ground connection G, and current blocking device 10 comprising avalanche diodes in section 11b.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2615

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8, 9, 19, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Funke in view of Kladar et al, US Patent 6,226,162. Funke does not disclose that the current blocking device comprising a varistor. Kladar et al teach that a varistor or avalanche diode may be used as a clamping device. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to substitute the diodes in Funke with a varistor, as taught by Kladar et al, for the purpose of providing an alternate means of clamping voltage on the ground line. Claims 8 and 19 are rejected. Regarding claims 9 and 20, it would have been obvious to include the circuitry in an electrical device for the purpose of protecting the device from electrical noise.
